1.618	165.6738979	9755.673898	9424.326102

Trend expectation as per 1SD method: Uptrend conformation 9614, successful cross over above 9653 will target 9670-9681-9717-9756. Down trend conformation 9566 successful fall below 9527 will trigger fall till 9510-9499-9463-9424.

Range bound trend identification: if all up-move invites sale above 9642 and all down move invites short covering at 9538 level this indication is sufficient to conclude that the price action is in the range of 9642 to 9538.

Above levels are weekly levels hence hedge the position with option for better money management. For intraday use our 1SD paid software or 1SD mobile App.

How to trade nifty future in uptrend above 9615? if nifty cross 9615 then you buy with 9600 put option long. If it achieves the 1st target 9653 during the day or any point during the week revise your stop loss to 9629 and hold the trade. If the 2nd target 9670 achieved revise the stop loss to 9641 and hold the trade. If the 3rd target 9681 achieved, then trail or revise the stop loss to 9670. Continue this till last target is not achieved or trailing stop loss is not triggered. If trailing stop loss trigger, then close the hedging option position also.

Note: I am using the call long simple option strategy to demonstrate hedging principle in trade. However, you can write the option also and do any complex strategy to protect the trade.

If your trade is with the option hedge and future has reached the stop loss, then do not quit the trade in hurry better wait for conclusive price crossover of 0.382 retracement
